About Us

Dubai, 50 years back, a barren deserted land was inhabited by a very modest population of various nationalities, this was when our founder Late Mr. Hargovind Dhakan (Babubhai) stepped into this land and started working as a Goldsmith.

While working as a Goldsmith, he faced many problems in sourcing the tools he required to make Jewellery. Being a true entrepreneur, he turned this problem into an opportunity and started bringing various tools from India and selling them in Dubai while he still continued working as a goldsmith.

Soon the demand rose as the population started increasing and he tapped this by introducing his three sons into the business, who soon took-over and expanded the business rapidly, sourcing the products from all over the world. It is then, and now, when Harshad is a brand in itself and the most reputed Tools, Machinery, Display and Packaging Material dealer in the Middle East, We are a one-stop-shop catering to all the needs of the Jewellery industry.

Having undergone restructuring in 2016, Harshad Group today signifies the highest level of customer service, Reliability and In-depth knowledge of the trade. Wanhao Curing box

Boxman1

Automatically cure your SLA, DLP, or LCD 3D prints with Wanhao's Boxman-1. The UV post-curing chamber is equipped with 4 UV LED light sources and mirrors. These are placed inside the box in such a way that your component(s) are perfectly illuminated from all sides. This ensures that your object cures evenly from all sides. By adding UV light, the free radicals in the resin polymerize almost completely and your part automatically receives the final material properties.

The UV device outputs steady, focused and consistent UV lights to cure the printouts printed with photopolymer resins in a short period. The post curing process increases the hardness and durability of the printed products.

Properties:

- * UV post-curing chamber for DLP, SLA and Daylight 3D prints
- * 4 UV LED sources cure from each side
- * Large interior of: 320x200x200 (LxWxH mm)
- * Give components their final material properties
- * Works with resin for DLP, SLA and daylight 3D printers
- * Optimized for Wanhao UV resin

Argenta APE 800

Temperature Controlled Burnout Furnaces

The furnace is used for heating the foundry cuvettes in the program specified by the producers of casting masses. Thermal insulation is made of ecological aluminosilicate fiber. The furnace is factory-equipped with a programmer, ensuring the implementation of two different programs, sixteen cycles each, with the possibility of setting the temperature of the cycle, its duration and temperature increase over time. It is possible to start the casting program with a delay. By default, on the first program, the stove is set to the popular 12-hour heat-up program. The program of the controller also ensures the execution of the program according to the entered assumptions, even in the event of a power failure and re-connection.

Kaname Rotary Burnout Furnace

* Maximum and Protected Burnout Temperature -950 °C

This overheat protected temperature makes the furnace perfect for casting stone in place, gold, silver, platinum and also compatible for resin casting.

* Separate Door for Upper and Lower sections

Reduced the cooling of the mold by 68% (at 600 degrees) making it possible to control the temperature of the mold more accurately during casting.

* Heat Distribution Control

There is minimum difference between the heater and chamber, this results in even distribution in the flask thereby giving equally good burnout from top to bottom of the casting tree irrespective of the location of the flask in the furnace.

* Separate thermocouples for upper and lower tables

* Eliminated Afterburner fan

Structural changes made to reduce smoke and odour without afterburner fan.

2 Door

By dividing the door from one to two, the upper and lower doors open and close during casting to allow air to enter the furnace.

This makes it possible to control the temperature of the mold during casting more accurately.

Thermocouple

In the old model, the thermocouple was placed between the upper and lower tables.

In the new model, a thermocouple is installed next to the mold on the upper and lower tables so that the temperature can be measured as close to the mold as possible.

Program & Logging

By increasing the number of steps from 8 to 12, it is possible to set the user's ideal program. The set value, current value, and current value of the burnout program are measured and recorded, and can be downloaded to a personal computer.

AB ON / OFF can be set for each step.

Afterburner Fan

Structural changes have been made to reduce smoke and odour without afterburner fan.

By eliminating afterburner fan, the problem that odours pass through the afterburner quickly was improved.

Oncel Rotating Dewaxing Burnout Furnace

Rotating Burnout / Dewaxing Furnace has been developed with 25+ year experience in jewellery casting equipment, under deep metallurgical knowledge and engineering principles.

The furnace has been engineered to solve the weak points of world known manufacturers.

Main advantage of furnace is high energy efficiency and temperature uniformity during whole operation. Heater capacities and locations are perfectly calculated and settled with detailed calculations and modelling.

This design prevents non-homogeneous or overheating of asks, also do not let any damage to heaters or chamber by non-qualified workers.

The chamber body is made of special high temperature resistant stainless steel.

A standard burnout operation can be done within 30-50 % lower energy of competitor furnaces.

Indutherm MC 60V

This small high-performance casting machine is ideal for smaller production quantities and can be used for jewellery alloys such as gold, silver, copper and bronze, as well as for alloys of brass and aluminium. Thanks to the vacuum and overpressure functions and the many automatic control features, the machine provides first class castings with little work

Main benefits

- * Very simple use, short training period, very good results even by operators with less experience in casting techniques
- * 3,5 kW generator enables quick melting periods
- * Thorough mixing of metal by induction generator (low frequency tuning)
- * Melting under vacuum for reduced danger of oxidation
- * Excellent mould filling because of inert gas / overpressure, max. 2 bars
- * Excellent ratio machine size to capacity: flasks up to Ø 100 mm x 120 mm h

Indutherm Induction Melting Units

MU 200

Flexible melting furnaces designed to melt gold and silver alloys and as well as aluminum, bronze, brass a.s.o. Due to the strong induction generator (15 kW) and the low induction frequency the stirring effect of the metal is excellent. The V or VV versions include one or two additional extra large capacity vacuum chambers. The short distance between melting and pouring leads to high quality cast even with filigree parts.

Indutherm Tilting Furnaces

4 Tilting Furnaces for melting and casting large quantities into ingots or shell moulds

These machines are designed...

- * for melting large quantities, for example in the recycling sector
- * for casting large parts into shell-casting moulds

Indutherm TF series – tried and tested in foundries, refineries and precious metal merchants across the world:

Our tilting furnaces are mainly used in two areas:

- * for melting down large quantities of metal such as antique gold or manufacturing residues like casting waste, scrap or swarf. 30 kW output and low-frequency tuning means fast melting – even for large volumes – and excellent through-mixing.
- * for casting large, heavy components e.g. after slip casting

H4 Gas Generator

The compact size, ease of use and high safety make the H4 gas generator an indispensable tool for every laboratory.

The principle of operation of the generator is based on the electrolytic dissociation of water to obtain hydrogen with a high purity for heat treatments in general, suitable for goldsmiths, silverware, costume jewellery eyewear, mechanics precision, etc.

The H4t model with special torch it is often used in the processing of plastic materials, opal and transparent acrylic, able to polish the mechanical processing of materials. Furthermore, another good advantage for these generators is to avoid accumulations of high pressure gas, because they are able to generate the quantity of gas necessary at the time of use with a considerable saving compared to the traditional cylinder system. Routine maintenance is extremely simple and economical

All welding torches are sold with needles, connection tubes.

Features

- * Electronic control of electrolyte liquid
- * Automatic control of working pressure
- * Safety pressure switch
- * Analogic instrumentation
- * Condensate collector and safety filter
- * 6-position power regulator
